WISEflow Examinations Survey 2017

Student Comments and Feedback

"Great as it allowed me to correct mistakes while typing but also hopefully means the marker can actually read my work for once."

"Overall a good experience. Taking pictures with the laptop camera was not a great experience."

"Exams were easier to take."

"It was a great experience, definitely something different and a change but for the first time. It did make me feel nervous with the change but overall went well and was able to write more with the typing rather than writing."

"The university should adopt WISEflow for all exams. Because for me it is a more convenient approach and I couldn't have produced that many words to express my answers using pen and paper."

"Good!"

"Initially I was nervous to use my own laptop to conduct the exams in fear technology could fail. However when actually taking the exams the process was much smoother than imagined. It was easier to type the answers rather than having an achy arm writing answers. It was also much quicker to exit the exam hall once exams completed. Overall really a neat idea to conducting exams!"

"It was good experience but for the people in the back it was hard to see proctor passwords so preferably announce the password."
